

SUGAR ANN

pea, sugar snap

One of the best features of Sugar Ann is its earliness, up to 2 weeks earlier than comparisons. Its plump, edible pods are very sweet. The short, compact growth habit of Sugar Ann makes it ideal for urban gardeners with limited space who were previously unable to grow snap peas. The peas grow on a compact, 18-inch-high bush and can be grown with or without support. Remove string from pods before cooking.

CULTURAL SHEET

Properties

Season	First Early
Approx. Days to Maturity	52
Approx. Heat Units to Maturity	
Node at First Bloom	15
Vine Type	Normal
Average Sieve Size	
Average Plant Height	24 inches
Average Pods Per Node	1-2
Average TSW	

Disease Resistances

Fusarium Wilt Races	
Bean Leaf Roll	
Pea Enation	
Powdery Mildew	
Downy Mildew
